ONLINE BACKUP

aspect it limited

? WHAT IS IT

Online Backup (OB) enables automatic backup of data from desktop PCs and servers running Windows or Mac to our own secure off-site data centre via an Internet connection.

OB works by taking a snapshot of your computers information and periodic changes at intervals which are saved in our own secure data center.

This means at at any moment in time, we can recover your information, or any previous stored version to get you up and running again.

? WHY DO I NEED IT

IT systems are great when they work, it is frustrating when the dont and catasrophic when they are damaged beyond repair.

It is unlikely that you will be affected by flood, fire accidents or theft but if you are, how long would it take to get your IT system back to what it was?

Insurance companies will provide the new hardware but cannot provide backups of your data or the settings and software that you rely on.

- Limit down time to an absolute minimum
- Protect critical files, settings and software
- Intelligent Data Selection
- Anywhere, Anytime Recovery

? WHAT DOES IT COST

SERVER

1license, per month	£25
